This book explains all the concepts underpinning SAP's HR Time Management Module. It is a comprehensive technical manual which explains every single node of the User Menu and the Configuration. The book first gives an overview of a concept explaining what it is, how it is used and how it relates to the other concepts. It then explains its properties, which are fields in a configuration node. This book is designed to be used both as a reference manual and a learning guide. As a learning guide, it offers four views, each for a different target audience. • It can be read from the Senior Management's perspective to gain a broad understanding of the subject and what SAP can do for them. • Business Process Owners can achieve a higher level of understanding by getting to know more of SAP concepts and how to perform different tasks in SAP. • Users can acquire a thorough understanding of different tasks and concepts underlying them. • Functional consultants and proficient users can read the book to gain a complete understanding of the system. As a technical reference, the book can be used to locate the relevant material through the Table of Contents, Index, 'SAP Menu' and 'SAP Customizing Implementation Guide (IMG)'. The last two follow the Table of Contents. If the reader is in SAP's User Menu or Configuration, the chapter number for these nodes can be found in 'SAP Menu' and 'IMG'. If a node is not covered in the book, the reason for not doing so is mentioned. The implementation of SAP HR Time Management and documentation can also be guided by the structure of this book. without Traffic Lights 705 SAP is a great software. One needs to fully understand its features in order to effectively exploit them for the benefit of customers. Mr. Agrawal's books on SAP HR have a unique approach. A chapter usually focuses on a single business concept, and discusses the user interface as well as its associated configuration. This logical division makes it easier for readers to understand the functionality. Another important feature of these books is the level of detail. Each screen and each field in a screen is explained. Explanation includes meaning, use case and in some cases guidelines. Details are balanced by overviews explaining the concepts and their relationships. While explaining functionality, Mr. Agrawal has taken efforts to highlight what can be done and how it is to be done. This is particularly important for less experienced users and consultants. Indicating chapter numbers against each menu and configuration item is a very useful innovation, as it establishes direct link between the SAP system and the book. Another useful feature is that these books can be read not only by consultants, but also by users, business process owners and even by senior managers. The importance of each topic for each category of users is specified. Mr. Agrawal has taken considerable pain in writing these books, and I congratulate Mr. Agrawal on his achievement and thank him for his contribution to the SAP community. K. The introduction of the New Engineering Contract (NEC) encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form. The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract. It is believed that these features reduce adversariality and disputes. The NEC seeks to achieve this aim primarily through co-operative management techniques and incentives built into the NEC's procedures. This commentary analyses and evaluates these and related claims of innovation. The New Engineering Contract: A legal commentary examines the background to the NEC, its design objectives, structure, procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them. Throughout the detailed commentary upon the NEC clauses comparisons to the traditional forms are also made to highlight unique features and principles of general application. The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract, addresses many of their short comings and offers one of the best models for their future development, direction and design. The commentary draws upon the body of the project management literature and legal analysis to support its conclusions. The New Engineering Contract: A legal commentary will be essential reading for lawyers, barristers and solicitors, as well as engineers and project managers.
