The Image of Georgian Bath 1700-2000 Nov 11 2020 This interdisciplinary study explores the evolution, structure, and uses of the image of Georgian Bath, from its genesis in the eighteenth century to its renaissance in the twentieth century. In recent decades there has been both a popular resurgence of interest in heritage and tradition, and a growing academic awareness of the power of imagery in shaping the lives of individuals and societies. There is perhaps no city in Britain so saturated in history and layered with historic imagery as Bath. It therefore provides an ideal case-study to investigate the dynamic fusion and impact of the forces of past and representation. The dominant perception of Bath today is that of a classical and particularly Georgian city. In this stimulating and scholarly study, Peter Borsay examines the construction and development of this image. Its principal components, biography and architecture, are explored, together with the media through which it was constructed and transmitted, as well as its commercial, social, political, and psychological uses. Dr Borsay concludes by relating the findings for Bath to current debates on towns, heritage, and the nature of history.

Ancient Greek Art and European Funerary Art Apr 16 2021

This book charts a significant aspect of European heritage: cemeteries. Cemeteries are nowadays considered as formal cultural sites and open-air museums attracting a great number of visitors; while cemetery records, memorial monuments, epitaph inscriptions and symbols provide useful data, attracting the interest of an increasing number of scholars from various disciplines and backgrounds. This collective volume consists of selected papers, presented at the ASCE (Association of Significant Cemeteries in Europe) Conference: "Ancient Greek Art and European Funerary Art" organized by the Harokopio University of Athens-Greece on October 5-7 2017, aiming to highlight various cultural aspects of cemeteries. The authors

present funerary art and its classical origin, investigate theoretical and historical approaches, plan cultural and educational routes, design technological applications concerning the use of cemeteries as cultural sites, and propose multiple ways for promoting cemetery heritage and public engagement; while the majority of the papers is based on field and archival research and is accompanied by original images. The multicultural character of death heritage is highlighted through the variety of case-studies presented in this volume, introducing different perspectives and interpretations on art, history, heritage and cultural tourism, laying the groundwork for the public discussion on our common heritage as appeared in cemeteries, appealing to both the wider public and the academic community.

[Kleppner's Advertising Procedure, Instructor's Manual with Video Guide](#) Nov 23 2021

[Imaging Practice and Radiation Protection in Pediatric Radiology](#) May 30 2022 This book offers the reader sound advice on how to perform optimal conventional pediatric radiographs and how to obtain quick and easy organ dose estimates in order to improve the optimization process in pediatric imaging. Clear guidelines are provided for minimization of the radiation exposure of children through optimization of the radiation exposure conditions, and conversion coefficients are presented for calculation of the organ doses achieved in organs and tissues

during conventional pediatric radiography, taking into consideration both optimal and suboptimal radiation field settings. Previously published conversion coefficients have failed to represent the variation in radiation field settings in daily clinical routine, which has made it difficult for the pediatric radiologist to estimate the impact of the field settings on absorbed doses in organs and tissues. The aim of this book, co-written by a pediatric radiologist, a physician and physicist, and a medical radiation technologist, is to address this issue by providing, for the first time, a thorough overview of clinical radiation field settings and their implications for radiation protection. An accompanying volume is devoted to fluoroscopy.

Visualization and Processing of Higher Order Descriptors for Multi-Valued Data Jan 02 2020 Modern imaging techniques and computational simulations yield complex multi-valued data that require higher-order mathematical descriptors. This book addresses topics of importance when dealing with such data, including frameworks for image processing, visualization and statistical analysis of higher-order descriptors. It also provides examples of the successful use of higher-order descriptors in specific applications and a glimpse of the next generation of diffusion MRI. To do so, it combines contributions on new

developments, current challenges in this area and state-of-the-art surveys. Compared to the increasing importance of higher-order descriptors in a range of applications, tools for analysis and processing are still relatively hard to come by. Even though application areas such as medical imaging, fluid dynamics and structural mechanics are very different in nature they face many shared challenges. This book provides an interdisciplinary perspective on this topic with contributions from key researchers in disciplines ranging from visualization and image processing to applications. It is based on the 5th Dagstuhl seminar on Visualization and Processing of Higher Order Descriptors for Multi-Valued Data. This book will appeal to scientists who are working to develop new analysis methods in the areas of image processing and visualization, as well as those who work with applications that generate higher-order data or could benefit from higher-order models and are searching for novel analytical tools.

Body Image, Eating, and Weight Sep 21 2021 This book equips readers with the knowledge required to improve diagnosis and treatment and to implement integrated prevention programs in patients with eating and weight disorders. It does so by providing a comprehensive, up-to-date review of research findings and theoretical assumptions concerning the interface and interactions between body image and such disorders as anorexia nervosa, bulimia nervosa, binge eating disorder, other specified feeding and eating disorders, orthorexia nervosa, overweight, and obesity. After consideration of issues of definition and classification, the opening part of the book examines the concept of body image from a variety of viewpoints. A series of chapters are then devoted to the assessment of the multidimensional construct "body image", to dysmorphophobia/body dysmorphic disorder, and to muscle dysmorphia. The third part discusses body image in people suffering from different eating disorders and/or overweight or obesity, and two final chapters focus on body image in the integrated prevention of eating disorders and

obesity, and cultural differences regarding body image. The book will be of interest to all health professionals who work in the fields of psychiatry, clinical psychology, eating disorders, obesity, body image, adolescence, public health, and prevention.
